

## Case Study

### *Epoxy Pipe RSE Gives the Croatts Family New Peace of Mind*

**The Problem:**

David and Judy Croatts have been living in their Creekside home located in Greenwood, S.C. for the past 17 years. They own and operate their family business, David A. Croatts & Associates, a well-respected, independent insurance agency. David stated he had been experiencing pinhole leaks in his copper piping over the last few years and hated the thought of the mess and inconvenience of a traditional repipe. As a

homeowners insurance provider, he is very aware of the ongoing expense that failed water piping can cause for his clients, as well as the insurance companies he represents. He contacted past customers of Epoxy Pipe and conducted independent research. After his research, David decided Epoxy Pipe was the best long-term solution that would eliminate his fear of flooding and damaging his home from failing water piping.

**The Solution:**

The Epoxy Pipe crew arrived at the Croatts' home and began the process by covering the floor with protective matting. The team left the home intact with a brand new piping system. When asked about what they liked most about working with Epoxy Pipe their reply was, "The crew was courteous, professional and very knowledgeable!" Now that the process has been completed, they have the peace of mind that their pinhole leaks are gone forever! Epoxy Pipe RSE offers the only permanent solution to pinhole and slab leaks today.

**The Analysis:**

Mr. Croatts was so impressed by the process and the Epoxy Pipe Crew that he said he would gladly recommend the process to his neighbors and clients. Another happy and satisfied Epoxy Pipe RSE customer!
