

Case Study

EPOXY PIPE RSE WAS RIGHT FOR THE DAVIS'

The problem:

Tommy and Martha Ann Davis live in a traditional brick home in Greenwood, SC. They experienced a leak in the wall of a hall way in their home. After repairing that leak by cutting a hole in the back of a closet, they had another leak pop the next day. In a bad spot with a big Christmas gathering right around the corner they decided to look at the Epoxy Process. The Davis' scheduled a free home inspection and after hearing all the benefits of Epoxy Pipe they decided it was right for them.

The solution:

The Epoxy Pipe crew arrived and started at the Davis home. Mrs. Davis said, "I was surprised how quickly everything got going and how clean the process was, which was huge for me with my party only a week away." "The Epoxy Pipe guys were very professional and polite." Mrs. Davis even left sausage balls for the guys one morning, pretty cool huh! Mr. Davis acknowledged that, "We thought the process was going to be very complicated and time consuming but it turned out to be quite simple." This project was completed from start to finish in less than 3 days. A standard repipe would have taken weeks. We were happy to help the Davis'.

The analysis:

When asked what they thought were the three biggest benefits of using Epoxy Pipe, "The amount of time it took from start to finish, no destruction to our home, and the cleanliness of the entire project!" "We were very happy to work with Epoxy Pipe as they were all friendly, prompt, and professional." Another happy and satisfied Epoxy Pipe RSE customer! Call for your free home evaluation and see if Epoxy Pipe is right for you.
