

## Epoxy Pipe RSE Protects Another Greenwood Home From Pinhole Leaks

### The Problem:

Barry and Diana Edwards live in Forest Hills Subdivision, an older upscale neighborhood in Greenwood, S.C. They started having some leaks in their water piping system under the house and since they have a two story home with two bathrooms upstairs, they decided they wanted to eliminate any possibility of a damaging leak. So far they had been lucky that their leaks had been under the house. They knew that if

they had a leak in the walls, ceiling or floors, then there would be more dramatic and costly damage. After doing their due diligence as well as speaking with their Insurance Agent about his personal experience with Epoxy Pipe RSE, the Edwards decided their best long term option was with the Epoxy Pipe Process.

### The Solution:

The Epoxy Pipe RSE crew arrived Monday morning as scheduled. The crew immediately placed down protective covering on all the flooring from the carport entrance door to the upstairs bathrooms. Both the hot and cold water lines throughout the 4.5 bathroom home were restored with the epoxy protective barrier in 3.5 days. Since Epoxy Pipe RSE offers the only permanent solution, the Edwards now have the peace of mind of not having any future leaks.

### The Analysis:

For their convenience, the Edward's were glad that Epoxy Pipe RSE was able to quickly arrange their schedule so the process could be performed while they were on a family vacation. It was great that the Edward's could return home to a clean, protected home!! Call for your free home evaluation and see if the Epoxy Pipe is right for you.
